GRADUATE DEGREE PROPOSAL:

I. Doctor of Philosophy in Engineering Science Degree

THESIS:

The Doctor's Degree will seek to show the validity of this "hypothesis:"

- ◆ Life, through evolution, seeks to unify matter and energy into more concentrated complex forms to create more of these energies.

Proof tested:

- ◆ The **Unification of all Infrastructure Systems** existing in a typical society into a **Single System** will eliminate the problems of that society.

This theory will be tested through the development of a publicly interactive computer database (GIS- Geographic Information Systems) system representing the ecological, economic, environment of a society. All available informational resources will be combined and reviewed by all participants, documenting all the sources, changes, additions, and deletions made by participants as additional information sources are included.

"Participants" should ideally all be members of the "society" being tested.

The candidate to represent the resulting data of this unification to define the truth of the Unification Theory of Infrastructure will generate new "combinations" through
